

## Destination Updates as on 25 June 2021

### BHUTAN

The Bhutanese borders remain closed for international tourism.

With over 90 percent of the Bhutanese adult population having received the first dose of the Indian manufactured AstraZeneca vaccine, the country has reached out to 17 nations to provide the vaccines for the second dose. However, due to delays in procurement and shortage of fresh vaccines has made the government consider securing a second dose of any of the WHO approved vaccines. Several countries including Canada, Bahrain, South Korea, and Spain have approved mixing vaccines.
